

Contingency Analysis

State Estimators are available to most system dispatchers, but many choose not to use them. This class will show the value of utilizing a contingency analysis tool by presenting several “what if” scenarios and evaluating all the available options to resolve system issues.

This class will allow students to investigate various options to resolve transmission issues and show how the use of a contingency analysis tool can aid in the decision making process. This hands-on class allows students to try various scenarios as a learning tool to explore how many situations can be solved in multiple ways.

- 16 CEH's, 10 hours EOPS, 6 standards and 12 hours simulation.
